Frequently Asked Questions for Prospective FSU Sport Psychology Graduate Students
(Created by Anna Ward, Nat Boiangin, and Dr. Graig Chow)

This FAQ document for the Sport Psychology Program at FSU was designed to supplement the information provided at http://education.fsu.edu/degrees-and-programs/sport-psychology. Prospective graduate students should review the above website and the FAQ’s below for detailed information about the program.

Application:
1. When are applications due (i.e., program versus university deadlines)?
   - Applications are due by January 15, but we recommend applying by December 15 as scholarship and fellowship deadlines are in January.
2. Do you only accept students for Fall admission?
   - Yes, students are only accepted to start in the Fall semester.
3. How many students apply/get accepted to the M.S. and Ph.D. programs each year?
   - M.S.: Approximately 110 students apply, 10-12 get accepted.
   - Ph.D.: Approximately 60 students apply, 2-5 get accepted.
4. What is the difference between the M.S.-Thesis and M.S.-Comprehensive Exam tracks? Why would I choose one over the other?
   - All master’s students are admitted as non-thesis track. Program faculty will later determine which students are qualified to pursue the thesis-track. This allows faculty to get to know the students and their research capabilities. If a professor agrees to serve as a student’s major advisor for the thesis, the student’s program will be changed to reflect M.S.-Thesis. Otherwise, students will complete a comprehensive exam.
   - Students with a strong research interest and capability would likely pursue the thesis-track, pending faculty availability and approval. If a student would like to pursue a Ph.D. (in Sport Psychology or another field) upon completion of the master’s, completing a thesis may be beneficial. If a student believes the master’s will be their terminal degree and plan on working in applied settings, the comprehensive exam track would be best.
5. What is the difference between the M.S. and Ph.D. programs? Which should I apply for? Can I be admitted to the Ph.D. program without a Master’s degree?
   - Students admitted to the Ph.D. program must have a master’s degree prior to starting the Ph.D. program, and are expected to have completed a master’s thesis prior to enrollment. Those who are admitted to the Ph.D. program without a master’s thesis are conditionally admitted and are required to complete a research project during their first year in the Ph.D. program.
6. What GRE scores/percentiles should I be aiming for (not just the “required” minimum)? What scores do students who are accepted actually get?
   - A minimum of the 50th percentile on both Verbal and Quantitative as well as at least 3.5 on the Analytical Writing.
7. What previous research or applied experience is required or expected for applicants?
- M.S.: At least 1 year of research experience.
- Ph.D.: At least a master’s thesis.

8. From whom should I get letters of recommendation? What does a good letter of recommendation look like? To whom should my recommenders send their letter?
   - Letters of recommendation should be written by persons who are in a position to comment on the likelihood of your success within the department. You are encouraged to submit at least 2 letters written by faculty.
   - Letters of recommendation are submitted by the recommender via the application portal. Applicants list the recommender and their contact information and the recommenders receive an email with instructions on how to submit their letter of recommendation.

9. I have degree(s) in__________, is there still a chance I can get accepted?
   - Yes, admitted students have a variety of bachelor’s degrees (e.g., Exercise Physiology, Kinesiology, Sport Management, Psychology, Marketing).

10. I haven’t taken ____ (courses/prerequisites), is there still a chance I can get accepted?

What courses do you recommend I take to prepare for the program?
   - Courses in sport psychology, exercise psychology, or performance psychology.
   - Courses in exercise science (e.g., anatomy & physiology, exercise physiology, and motor skills/learning) and psychology are also useful.

11. If I have questions before being accepted/admitted, who do I ask?
    - Eileen Sirois processes the applications for sport psychology; if you have questions about the application, she can be reached at esirois@fsu.edu or (850) 644-8786.

12. Who do I send my application materials to?
    - Applications and all supplemental documents (e.g., transcripts, CV, letters of recommendation, personal statement, writing samples) are submitted online through the application portal: http://www.admissions.fsu.edu/

**Visiting:**

1. Do you have scheduled preview or interview days?
   - Yes, the College of Education Preview Graduate Programs Open House will be held October 14, 2017. RSVP at http://bit.ly/2p9EdHa.

2. When should I come to visit? What time of year/what events might be worth visiting for?
   - Our graduate student organization SPORT (Sport Psychology Organization and Research Team) hosts an Annual Speaker Series in October where a sport psychology professional presents their research on a given topic. As we aim to have this event during the same weekend as the College of Education Preview, this is an excellent time for prospective sport psychology students to visit. SPORT also hosts an annual conference called SPEAR (Sport Professionals’ Experience and Research) typically held in February. Attending the speaker series or conference allows you to meet and interact with most of the students in the program, the professors, and get a good idea of what it’s
like to be a student here. All other visits are subject to the availability of professors and students. You can find out the dates and more information for these events by viewing the SPORT website: 
https://nolecentral.dsa.fsu.edu/organization/sportpsychologyorganizationandresearchteam. 
You can also contact SPORT’s President (Matteo Luzzeri: ml14m@my.fsu.edu) if you have additional questions.

3. Is it better for me to visit before I apply or after I’ve been admitted?
   - Students often plan to visit before applying in order to see if the program is a good fit (e.g., location, professors, etc.). Once admitted, we suggest you plan a visit so that you can get to know the area in more detail and look for housing.

4. Who can I meet with when I visit? How do I schedule meetings with current students or faculty?
   - If you are unable to attend one of the events listed above, then the best place to start is http://visit.fsu.edu/. Here, you can schedule campus walking tours. Additionally, students typically e-mail the professor(s) they are most interested in working with and schedule meetings with them. Current students are also usually available to answer any questions and give you a tour of the Sport & Exercise Psychology Lab.

**Funding:**

1. Who gets assistantships?
   - Assistantships are limited in our program. Ph.D. students in their second year of study or later may have opportunities for teaching undergraduate courses in sport, exercise, and performance psychology.
   - Many students apply for and obtain assistantships outside of the program, but the Sport Psychology program does not have control over these, so it is up to the student to seek such opportunities by contacting departments, colleges, and other centers on campus.

2. How do I know what assistantships are available? How do I find assistantships being offered on campus?
   - Assistantships vary depending on the college. The best way to find out what is out there is to contact the different departments and laboratories on campus and inquire on the availability of such funding.
   - Bryan Richards is the office manager for EPLS and processes appointments for students who become University employees and receive graduate assistantships and tuition waivers. He has no information about what assistantships are available in the program, college, or University and is not responsible for filling open positions or finding funding for students.

3. What does an assistantship cover? Do I get paid?
   - An assistantship covers nine credits of tuition (not fees). In addition, students receive a stipend depending on the assistantship they have.

4. Besides assistantships, what funding opportunities are there? (e.g., scholarships, fellowships, paid internships/practicums, financial aid, etc.)?
   - The College of Education offers various funding opportunities students can apply for (http://education.fsu.edu/student-resources/scholarships-and-aid). You can find more information at the Office of Graduate Fellowships and Awards (http://ogfa.fsu.edu/).
- Many scholarships and fellowships require faculty recommendation (not student application) which is why we encourage applying by December 15 to give faculty adequate time to review the application and put forth recommendations by mid-January (see Application question #1 above).

5. How do students manage to get funding in their first year?
- The majority of our students find it difficult to get funded in their first year. Funding in the first year primarily depends on the ability of the student to find opportunities outside of the department and/or outside scholarships. Ph.D. students (both international and domestic) in their second year and beyond are eligible to teach one of our undergraduate Sport Psychology courses pending fulfillment of teaching prerequisites.

Students’ Experience:
1. What does a typical day for a master’s/doctrinal student look like?
  - Students in our program are very busy! Besides taking courses (usually three per semester), most are involved in supervised applied practicums where they work with team and individual clients, conduct research as part of a professor’s research team and their individual thesis/dissertation projects, and Ph.D. students often teach undergraduate Sport Psychology courses.

2. How many years does it take to complete the M.S./Ph.D.?
  - M.S.-applied track: 2 years
  - M.S.-thesis track: 3 years
  - Ph.D.: 3-5 years

3. How many students are in the M.S./Ph.D. programs?
  - Approximately 20 M.S. students and approximately 20 Ph.D. students

4. How similar is graduate school compared to undergraduate? What differences do you see?
  - While some aspects of graduate and undergraduate study are similar (e.g., taking courses and doing homework, making friends with classmates, attending sporting events), graduate school is quite different. The age of students varies much more than in undergraduate and campus life is much different. Graduate students don’t typically live on campus and experience their time on campus much differently than undergraduates.
  - Undergraduate programs are more general areas of study. In Sport Psychology, you’ll take a series of very specific courses, such as applied sport psychology, cognitive processes in sport psychology, and stress and motor performance. Courses are most likely offered once a week rather than 2-3 times, have less students, and involve scientific reading, presenting, and writing assignments.
  - As a graduate student, you’ll be expected to do more than attend class; you should plan on also participating in research groups and doing an applied practicum.

5. Are there international students in your program? What is their experience like?
  - We have a very diverse student population! We have students from the U.K., France, China, Italy, Iran, South Korea, Denmark, Israel, and Colombia. Working with students from all over the world provides a variety of unique learning experiences and opportunities.
- Check out the Center for Global Engagement (https://cge.fsu.edu/) for international student information and to speak to someone about the international graduate student experience.

6. Besides taking courses, what is required for degree completion?
- For the M.S.-thesis track and Ph.D., students are required to complete and defend a thesis/dissertation. M.S.-applied track students are required to take a comprehensive exam and participate in supervised applied practicum.

7. What careers do students who graduate pursue? What job opportunities are out there?
- Our alumni have careers in academia, private practice, military, coaching and athletic training, and with professional organizations such as the MLB. Opportunities depend on the interest and qualifications of the student.

8. What opportunities are there for professional networking? How well are you introduced/integrated to the professional sport psychology field?
- Attending conferences is the best way to network. Our students attend and present at conferences such as AASP (Association for Applied Sport Psychology), NASPSPA (North American Society for Psychology of Sport and Physical Activity), APA Division 47 (American Psychological Association), FEPSAC (European Federation of Sport Psychology), and ISSP (International Society of Sport Psychology). Students also have the opportunity to serve as student representatives of AASP, review conference presentation abstracts, or review manuscripts for publication. All these activities give students opportunities to meet and work with professionals in the field.
- We also host an annual conference here on campus and invite prolific researchers and practitioners in the field each year. This is a great opportunity to meet and network with professionals.

Professor/Advisor/Mentor Relationships:
1. How/when will I be assigned a major advisor?
- M.S.: During the 1st year, Dr. Tenenbaum, Dr. Chow, and Dr. Gabana serve as co-advisors to all master’s students. This remains the case throughout the master’s program for those on the M.S.-applied track. For those who are approved to the M.S.-thesis the track, the professor who approves you serves as your major advisor.
- Ph.D.: When applying to the program, you will be asked to choose an advisor. Your choice should be based on the match between your research interests and the professor.

2. How available are the professors for advising/meetings/guidance?
- The professors have designated office hours for their courses and are commonly available for individual meetings by appointment.

3. How often do the professors meet with graduate students?
- This primarily depends on the student and how often they request meetings. The professors are open to meet with students as many times as the student requests.

Research:
1. Do you have regular research lab meetings? What are they like?
   - Dr. Tenenbaum’s research group meets as a whole once a month. In addition to the monthly research meetings, individual research groups within the whole meet more frequently.
     - Current projects include:
       - Testing the Ironic vs. Overcompensation Theories in Golf Putting
       - Post-Quiet Eye Effect on Golf Putting
       - Physiological Effects of a VR Guided Relaxation Experience
       - Creativity in various sport psychology facets
     - Dr. Chow’s research group has several ongoing projects; these groups meet bi-weekly with Dr. Chow.
       - Current projects include:
         - Review of Supervision in Sport Psychology Literature
         - Stigma Reduction Intervention for Psychological Services
         - Expert Approaches to Conducting a First Sport Psychology Session
         - Implementation and Evaluation of a Performance Profile Intervention with Collegiate Athletes
         - Values Intervention
         - The Role of Coaches in Preventing and Managing Alcohol Consumption of their Student-Athletes
   - Research interests of sport psychology professors can be found at http://education.fsu.edu/faculty-and-staff?sub_categories=45.

2. Do you work on only your professor’s research, or can you pursue research interests of your own?
   - You are able to work on your professor’s research and also have the opportunity to propose your own interests to the research group. Theses and dissertations are often guided by the student’s personal interests under the supervision of a professor.

3. What are the research interests of current students?
   - Our students’ research interests are diverse and cover a range of sport and exercise psychology topics including: decision making in athletes, coaches, and referees; attention allocation; quiet-eye and post quiet-eye periods; creativity in sport; visual perception processes; effects of exercise on executive functioning; exercise adherence; ironic theory of motor tasks; using EEG to study burnout; athlete transition; choking; supervision practices in sport psychology; professional development of graduate sport psychology students; providing online sport psychology services; stigma reduction for seeking sport psychology services; intervention implementation; performance profiling; and mindfulness, just to name a few!

4. What opportunities are there for attending/presenting at conferences? What opportunities are there for getting published?
- Our students attend and present at conferences such as AASP (Association for Applied Sport Psychology), NASPSPA (North American Society for Psychology of Sport and Physical Activity), APA Division 47 (American Psychological Association), FEPSAC (European Federation of Sport Psychology), and ISSP (International Society of Sport Psychology).

- Typically students present and publish research from their thesis/dissertation projects as well as from research groups. If research is a priority, students have many opportunities to work on projects that will lead to presentations and publications.

5. Do you have a lab? How is that facility used?
- Our Sport & Exercise Psychology Laboratory is located in the College of Education, Stone Building. The lab is primarily used as a space to conduct research projects, consult with clients, conduct workshops, and host classes. Students and faculty also use the lab for various meetings and as a workspace. Additionally, we provide the opportunity for students to become exposed to various technologies (e.g., biofeedback, mobile eye-tracking, motion analysis, DynavisionD2, etc.).

6. What opportunities are there for obtaining research grants?
- Our students apply for and have been awarded several different grants from various entities. APA offers opportunities for students to apply for a Dissertation Research Grant and/or Early Graduate Student Researcher Award. These grants range from $1,000-$5,000. The NCAA offers a Graduate Student Research Grant Program, in which research grants of up to $7,500 are awarded. AASP also provides students with the opportunity to apply for research ($250-$5,000) and community outreach grants ($250-$5,000). Further, much of the technology in our lab has been acquired by means of Florida State University technology grants that members in the Sport & Exercise Psychology Laboratory have applied for. Since 2012, lab members, led by Dr. Gershon Tenenbaum & Dr. Graig Chow, have acquired over $130,000 in technology grants for scholarly advancement.

Applied:
1. As a M.S./Ph.D. student, do I have a chance to work with athletes/teams?
- M.S.: Currently there are formal opportunities for students in the master’s program for supervised applied experiences with athletes. Master’s students shadow the applied work of advanced students during the first semester while also attending didactics, and serve as apprentices during the second semester. Following the shadowing and apprentice experience as well as successful completion of core courses (e.g., Introduction to Sport Psychology, Applied Sport Psychology, Introduction to Counseling Theories and Techniques), master’s students are eligible to begin consulting under the mentorship of a doctoral student. Master’s students must enroll in 1 credit of Field Lab Internship (EDF 5942) each semester they are involved in applied work (as a shadow, apprentice, or consultant).
- Ph.D.: Currently there are formal opportunities for students in the doctoral program for supervised applied experiences with athletes. Doctoral students typically shadow the applied work of advanced students during the first semester while also attending didactics and serve as apprentices during the second semester. Following the shadowing and apprentice experience as well as successful completion of core courses (e.g., Introduction to Sport Psychology, Applied Sport Psychology, Introduction to Counseling Theories and Techniques), doctoral students are eligible to begin consulting (under the mentorship of an advanced doctoral student during the first year of consulting). Depending on the doctoral student’s prior academic and applied background, some exceptions to this process may apply upon supervisor approval. Doctoral students must enroll in at least 1 credit of Field Lab Internship (EDF 5942) each semester they are involved in applied work (as a shadow, apprentice, or consultant).

2. When will I be able to work in applied settings? What is required of me to do so? What prerequisites are there?

- Students have the chance to participate in applied practicum/supervision starting in their first semester. Students typically start with a semester of shadowing, a semester as a consultant apprentice, and then a consultant. The practicum supervisor assigns consultants to teams based on need and fit. Apart from serving as a shadow and an apprentice, students should have completed coursework including: Sport Psychology, Applied Sport Psychology, and Introduction to Counseling Theories and Techniques.

3. Do you have applied internships? Are these free or paid?

- We don’t offer internships; however, students work with athletes as part of their supervised practicum. The practicums are provided to team and individual clients pro bono.

4. What certification/licensure can I get upon graduating from your program? Does your program provide the opportunity to meet all CC-AASP requirements?

- Students are not able to attain any psychology/counseling licensure or certification upon completion of the program; however, all courses required for CC-AASP are available at FSU to take. Most doctoral students attain the required 400 hours and master’s students attain between 100-300 of the required hours.

FSU/Tallahassee:

1. What is it like to live in Tallahassee? What do you like about FSU? What do students typically do on “days off”?

- Tallahassee is definitely a college town! Between FSU, Florida A&M University, and Tallahassee Community College, there are 75,000 students who live here. That means there are lots of social events, restaurants and bars, parks and rec fields, and a young, energetic vibe.

- By attending FSU, students have the opportunity and flexibility to work within a supportive environment and pursue their interests (research, applied, or both). We are a large university that offers plenty of social events and activities. Our students enjoy
attending sporting events (e.g., Football, Soccer, Track & Field, Volleyball, Baseball, etc.), bowling at the Union, or going to FSU’s Reservation where you can relax by the lake, go paddle boarding, canoeing, or go through a ropes course. On days off, students also venture off campus and go to the beach, float nearby rivers, or bike/run on the many trails and paths throughout and near Tallahassee.

2. Why did you choose FSU?
   - Students have given the following reasons for choosing our program: renowned and respected faculty, reputation of the program in the field, having both research and applied opportunities, cutting edge technology for research and applied work, research interests matching the professor’s expertise, liking the campus and feel of FSU, cost of living being relatively low, collegiality and collaboration of students, and FSU’s storied and successful sports teams.

3. Do you live on or off campus? Is it better to live closer to campus or is it okay to live a little further away? How much is typical for rent?
   - Most students live off campus. There are no graduate-only housing options on campus. Parking on campus can be tricky, so many students choose to live close enough to campus so they can walk or bike to class. FSU has an extensive shuttle bus system which allows students to live further away from campus but not rely on finding parking. However, living further from campus and driving gives students more options for housing. You can expect to pay $600-$1000/month. If you choose to live with roommates, you can pay much less. Upon being admitted to the program, students will receive additional housing information and the contact information of other admitted students so housing options can be arranged before starting in the fall.

**Psychology/Counseling:**
1. Are there opportunities to receive a counseling degree in addition to the sport psychology degree? Can I dual-enroll? What kind of relationships are established with psychology/counseling?
   - Although there are not any opportunities to receive a counseling or psychology degree or the option of dual-enrolling, students are able to take courses from the counseling program, such as: Introduction to Counseling Theories and Techniques, Group Counseling, Behavior Modification, Biological Basis of Behavior, and Psychosocial and Multicultural Aspects of Counseling. These courses are used to meet CC-AASP course requirements. Additionally, the Counseling and Psychological Services faculty often serve as thesis/dissertation committee members and students sometimes join their research groups.

2. Do students typically get additional counseling/psychology degrees after finishing the master’s?
   - Many students seek additional degrees after graduating from our master’s program. In addition to the Sport Psychology degree, our students have graduate degrees in Mental Health Counseling, Experimental Psychology, Clinical Psychology, Developmental

3. Is the sport psychology program at FSU APA accredited?
   - No, APA accreditation is for clinical and counseling psychology programs.
