Dr. Carolyn Herrington

Getting Inside the Black Box of Publishing in Academic Journal

Academic publishing sits at the core of the infrastructure for the dissemination and control of quality for research worldwide. The norms, processes and mechanics by which a research activity is translated into a peer-reviewed journal article have been developed over the last century and are considered the safe guards of quality in today’s world of research.

This presentation will pull back the black box to describe how manuscripts are received, reviewed and determined by peers to be suitable for publication in a highly-ranked, internationally influential educational research journal, *Educational Researcher*, which is currently housed at FSU.
